

ESSAY OF GEIW 24

Participating in the Global Entrepreneurship and Innovation Week (GEIW) 24 was a big deal for me. Being the president of the LDX Club and participating in it as an organizer of the conference taught me a lot and it was one of the greatest opportunities. Organizing our conference hosted by ENSET MOHAMMEDIA in GEIW24, sharing what I did during it, and what about my favorite moment. I enjoyed my participation in it.

The GEIW 24 was organized by ENSET Mohammedia. To begin with, it was a three-day event where clubs could show off what they've been up to. The theme was "AI and Dynamic Entrepreneurship," which means it was all about technology and business additionally how the AI entered the world of Entrepreneurship and all of the experts are building their own start ups using AI. Secondly, the first day was about the entrance of GEIW 24 when Each club got to talk about what they do, which was awesome because it showed how clubs make school life better, for example for Us as LDX CLUB we did introduce our club, our missions, our values and the activities we did accomplished so far. Thirdly, the last two days were about the whole work of competition, conferences and the closing of GEIW24. Participating in GEIW 24 was a remarkable experience.

The preparation was tough and exhausted as the president of the LDX Club. Firstly, our club wanted to host a conference about AI, entrepreneurship, and leadership. it has a thematic of "lever of innovation and entrepreneurial dynamics" and we did frame it into three big Aspects, we started with knowing about Generative Artificial Intelligence then in this era of AI we should discover the Entrepreneurial and in the end what's the Impact of AI on Management. Secondly, I learned about leading and working with others, for example when we were working on Design the Flyer of the Conference, it was some conflicts but we did manage that. Thirdly It took us month to plan, but it paid off. We had great speakers, including Mr. YOUSSEFI for the first axis, Mr TABAA for the second axis and Mr Berhil for the last axis, it was an interactive conference with students and Guests. Even though I had to leave early for another conference, it was still a great experience.

The best part for me was giving a speech about the LDX Club on the first day. First of all, our club was new, so we didn't have much to show. But standing in front of everyone and talking about what we do was amazing. People liked it, and it made me feel proud of what we achieved. Besides, balancing my studies in software engineering with club activities hasn't been easy, but it's been worth it. Last, Leading the LDX Club at GEIW 24 taught me skills that employers like. It also made me want to be an entrepreneur even more.

In short, GEIW 24 was a big deal. It showed me how important teamwork and leadership are. It also inspired me to keep working hard and aiming high in my future career.
